Maddy Carter should have died on a plane in 2010. Sal Vikram should have died in a fire in 2029. But all three have been given a second chance - to work for

an agency that no-one knows exists. Its purpose - to prevent time travel destroying history . . . When Maddy mistakenly opens a time window where and when she shouldn't have, Liam is marooned sixty-five million years ago in the hunting ground of a deadly - and until now - undiscovered species of predator. Can Liam make contact with Maddy and Sal before he's torn to pieces by dinosaurs - and without endangering history so much that the world is overtaken by a terrifying new reality? USA Today bestselling author Chris Taylor's latest book in the hugely popular Munro Family Series doesn't disappoint... Everything comes at a price... When Australian Federal Agent Brandon Munro accepts a job transfer in a High Tech Operations Unit, he's hoping for a fresh start. What he gets is an unexpected blast from the past. Four years earlier, walking out on his wife without explanation was his only option, but now there's nowhere left to hide. She's a senior agent in his new unit; it's only a matter of time before he'll be forced to face the truth. Highly respected Federal Agent Alexandra Cavanaugh has worked hard to forget the man she once loved and is now hell-bent on putting online child predators behind bars. Her team of specialized officers is in pursuit of an international pedophile ring. When Brandon transfers to her unit, Alex's life is once again thrown into turmoil. Hiding a secret from their past, she's determined to ignore the feelings Brandon evokes inside her while focusing only on the case. Pitted together in a race against time, Alex and Brandon are forced to confront their past. As the pressure mounts, Brandon struggles to deal with his guilt and reconnect with the woman he still loves. Alex is terrified that Brandon will discover her secret. As they grow closer, will Alex's deception destroy everything they've rebuilt? If you love Sandra Brown, Tami Hoag, J.D. Robb, Liliana Hart and Karen Rose, you'll love USA Today Bestselling author Chris Taylor's Munro Family series. Start reading it today and get hooked on a new series.

Chess tactics explained in English: the website [www.chesstactics.org](http://www.chesstactics.org) in book form. This volume is the first in a two-part set. The two books together contain over a thousand examples organized in unprecedented detail. Every position is accompanied by a commentary describing a train of thought that leads to the solution; these books thus are the ideal learning tool for those who prefer explanations in words to long strings of notation. This first volume provides an introduction to tactics and explains forks and discovered attacks. (Book II covers pins and skewers, removal of the guard, and mating patterns.) A hardcover version is also available. Don't look for serial killers... one in 25 of the people around you is a psychopath, hiding and living a secret life. Psychopaths take what they want, using their charm and wits. They feel only the emotions of a predator. In this book Pieter Hintjens decodes the mystery of the psychopath. Why do such people exist? How do they operate? And most critical of all, can we learn to avoid them, or escape them? The answers will enlighten you. This book delivers practical tools and techniques to survive the most difficult people. Science content helps develop the skills needed to understand how science works, learn new concepts, solve problems, and make decisions in today's technological society.

A "fascinating and terrifying" memoir of one woman's extraordinary effort to save her husband's life (Scientific American) -- and the discovery of a forgotten cure that has the potential to save millions more. Epidemiologist Steffanie Strathdee and her husband, psychologist Tom Patterson, were vacationing in Egypt when Tom came down with a stomach bug. What at first seemed like a case of food poisoning quickly turned critical, and by the time Tom had been transferred via emergency medevac to the world-class medical center at UC San Diego, where both he and Steffanie worked, blood work revealed why modern medicine was failing: Tom was fighting one of the most dangerous, antibiotic-resistant bacteria in the world. Frantic, Steffanie combed through research old and new and came across phage therapy: the idea that the right virus, aka "the perfect predator," can kill even the most lethal bacteria. Phage treatment had fallen out of favor almost 100 years ago, after antibiotic use went mainstream. Now, with time running out, Steffanie appealed to phage researchers all over the world for help. She found allies at the FDA, researchers from Texas A&M, and a clandestine Navy biomedical center -- and together they resurrected a forgotten cure. A nail-biting medical mystery, The Perfect Predator is a story of love and survival against all odds, and the (re)discovery of a powerful new weapon in the global superbug crisis. No, recent memory has her waking up amidst smoking wreckage in a hellscape of craggy rocks and woman-eating trees. Did she mention the near-miss to her femoral artery or the deadly respiratory bacteria? Nevertheless, she found drinking water, Meals Ready to Eat, assorted supplies, a stray alien dog, and her trusty artificial general intelligence sidekick hasn't steered her wrong yet. With Amity's ineffable optimism, she knows she's going to be okay, especially when she can reunite with her bestie, Pattee Crow Flies. But when Amity finds out that Pattee is with someone, as in, together, as in, mated? No. Just no. Amity is determined to hike to Pattee's nearest known location on Predator Planet if it kills her. Because the Pattee she knew would never succumb to the wiles of some lusty alien hunk and settle down for the domestic life. Amity needs answers STAT. Natheka knew, almost the exact moment the ship entered Ikthe's atmosphere, that his heart mate was on board. Now he was on a mission to find and collect the possibly injured human and bring them into the bosom of their brotherhood to reunite them with their fellow humans, and of course, to inform them that they were his heart mate. Wisely, he decides he may not want to lead with that information when they meet. But the meet cute involves a very touchy devil dog, two killer snakes, and a wounded and suspicious woman named Amity. All things

considered, Natheka can't complain. Amity might be aloof, but she's inquisitive, brave, and carries the pelt of the Tree Thief. With a devil dog brought to heel, Amity shows every sign of being the mighty warrior Natheka desires in a mate. Until he finds out she hates killing. His planet is known as Certain Death. Kill or be killed is the key to survival, and if he wants his heart mate to survive, he may have to take on double duty. But the promise of a heart mate at his side means he's willing to do anything, even face off with the Ikthekal's deadliest enemy, if that's what it takes. Amity knows she can make a life for herself on the mysterious yet phenomenally beautiful Predator Planet. But this mythical legend of the heart mate has her questioning everything. Because she's a scientist first, and while there are lots of evolutionary reproductive adaptations, she's never heard of one like this. Yet there's something about the soft-spoken, creative runner who keeps saving her life. Natheka is handsome, strong, intelligent, and damn if he doesn't smell intoxicating. He could definitely be a special friend. But those heated glances and practiced hands? He could be so much more. Amity just has to surrender to her feelings. Or die trying. Hounded on Predator Planet is the long-awaited third book in the Predator Planet series. It contains mild swearing, monster violence, high adventure, slow burn, heated looks, and a steamy hygiene facility scene that will make you swoon. "Reference book for children about all predators in the animal world"-- This monograph is about predation in vertebrate animal community. The studies were done in the seminatural terrains with transitional mixed forest within the European forest zone in Belarus. The result part was organised as a top-down flow: First, the community characteristics related to predators were estimated. I presented data on predator species richness, population density and biomass with special attention paid to the changes in predator species diversity occurred during the last two centuries and particularly in connection with the American mink and raccoon dog naturalization. Then, the main features of predator food niches were given, and the structure of various predator guilds and size structure in predators were analysed. The next part of the monograph was devoted to examining of community-important factors acting in semi-natural terrains. Such factors affected either the whole community or its marked fragment. The last quite a large part of the monograph consisted of many chapters which present more or less essential results on different predator species, and stresses hot questions of their population ecology.
